

Collimated Beam Sensor Ultra-compact Laser/Class 1
HL-T1 Series

CMJE-HLT1(05) No.0066-77V

Thank you for purchasing our product. Be sure to read this manual before use in order to ensure the safe and proper operation of this product. Keep this manual at hand for your reference after reading it through.

- This product is intended to detect the objects and does not have the control function to ensure safety such as accident prevention.
- Do not use the product as a sensing device to protect human body.
- Please use the products that comply with local laws and standards for human body protection specified by e.g., OSHA, ANSI and IEC.
- Do not use the product in the atmosphere of flammable gas, to prevent explosion.

For detailed information, refer "our web site : <https://panasonic.net/id/pidsx/global>". You can download the Manual from our Website.

Getting Started

Check the following items before using this product.

- **Sensor head model**
Check the model name of product at the top of sensor head. The model number is provided with the name of the product.
- **Bundled Items**
Make sure that the following items are in the package.
• Sensor Head Emitter × 1 • Sensor Head Receiver × 1
• Sensor head-controller connection cable × 1
• Sensor head mounting bracket set × 2 (Sensor head mounting brackets: 1 pc., M3 screws: 2 pcs., Nut: 1 pc.) • Chinese laser class label set
• Light beam alignment stickers × 2 • Label set (HL-T1□□□ F only) × 1
• Instruction Manual (This publication) × 1

1 Cautions on Handling Laser Light

- JIS/IEC/GB/KS**
● With the objective of preventing injury to users of laser products before it can happen, JIS C 6802-2014, "Safety Standard for Laser Products", based on IEC (International Electrical Standards Committee) standards, was stipulated. In JIS C 6802-2014, laser products are divided into classes corresponding to the degree of danger of the laser component, and preventive measures to assure safety which should be taken with each class are stipulated.
● **Class Categorization of the HL-T1□□□A. (JIS / IEC/GB/KS)**
This product is regarded as Class 1 laser product not only by JIS C 6802-2014 "Safety Standard for Laser Products" but also by IEC60825-1-2014 and EN60825-1-2014.
• The following label is affixed to a side of sensor head according to the laser device safety standard.
• When this product is used in China, replace the chinese label (accessory).

- FDA**
● **About Export to the United States**
If this product is exported to the US as a component of a machine or instrument, it is governed by the regulations for laser standards of the FDA (Food and Drug Administration). Use a device which complies with FDA standards. The models which comply with FDA standards are as follows.

HL-T1001F HL-T1005F HL-T1010F

- With the objective of preventing the occurrence of injuries to persons using laser products before they happen, the FDA (Food and Drug Administration) has stipulated the following standard. Part 1040 (PERFORMANCE STANDARDS FOR LIGHT-EMITTING PRODUCTS)
- In this standard, laser products are classified in accordance with the degree of danger of the laser, and preventive safety measures have been stipulated which should be executed for each class. (See the list of required items for laser products.) This product is classified under this standard as follows.
- **HL-T1□□□ F Classification (FDA)**
- The following label is affixed to this product based on the FDA standard.

- **Laser Beam Attenuator**
In case there may be a hazard that the eye can be exposed to the laser beam while working, fit the laser beam attenuator, provided as accessory, on the aperture of laser radiation.
- **Laser Beam Indicator**
While the laser beam is being emitted, a green LED on the sensor head lights up. This LED can be checked even through the laser protective glass.
- **Export to foreign countries other than the US and use.**
In the case of export to areas other than the US or use in those areas, replace the label on the model that complies to the FDA standards, the HL-T1□□□ F, with the supplied label.

2 Connection

Connect the sensor head and controller by the following procedure, connect the power supply, then turn it on.

- Connection cable and controller**
Insert the controller connection connector on the connection cable with the controller's input cable connector, inserting it until the ring on the outside of the connector locks.
- Connection cable and sensor head**
Insert the connection cable's sensor head connection connectors in the emitter / receiver connectors until their claws lock in the grooves of the emitter / receiver connectors. Connect the emitter side to the connector with a gray cable and connect the receiver side to the connector with a black cable.
- The antistatic cover has been fitted on the connection cable.**
After connecting the sensor head and connection cable, be sure to cover the connector with the anti-static cover.
- Connect the power supply to the controller, then turn on the power.**

- Notes: 1) When high resolution is particularly necessary, use a stabilized power supply that is separate from any other power system.
2) If wiring is done incorrectly, it could cause damage, so carry out wiring correctly. [Particularly in the case of the linear output (Black), do not bring it in contact with any other wire. In case not using the linear output, insulate cable core and shield cable each to prevent contacting of them.]
- When the power is turned on, the following screen is displayed in the controller.**
The controller's format is displayed in the top row and the number of channels is displayed after that. The software version is displayed on the bottom row. Operation switches to normal operation after this information is displayed for 3 seconds.

※In some cases, the version will be changed. ※This example shows the display in the case that the mode select switch is in the RUN position. The numbers shown in the display are display examples.

3 Laser Beam Alignment

- Align the laser beam.
- Install the emitter and receiver.
The laser beam has directivity, so be careful of the installation direction of the emitter and receiver.
 - Affix the laser beam alignment sticker supplied to the front of the receiver and adjust the emitter and receiver so that the emitted beam strikes the center of the cross marks. After adjustment, be sure to remove the sticker.

4 Cautions

Connection

- This product is made to satisfy the specifications when the sensor head is combined with the controller. In any other combination, not only may it not satisfy the specifications, but could be the cause of breakdown, so by all means, use it so that there is a combination of the sensor head and controller.
- Installation of the sensor head and controller, and their removal, must always be performed with the controller's power turned off.
- If the cables are pulled, it could cause the wires in the cable to become disconnected, so exercise caution.

Power Supply

- Use this product 10min. after the power is supplied. Immediately on supply of power, the electrical circuit has yet to stabilize, which may cause variation in measured values.
- After turning on the power, there is a muting period of approximately 5 sec., so exercise caution.
- Take care that the wrong wiring may damage the sensor.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- Make sure to use an isolation transformer for the DC power supply. If an auto-transformer (single winding transformer) is used, this product or the power supply may get damaged.
- In case a surge is generated in the used power supply, connect a surge absorber to the supply and absorb the surge.

Wiring

- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- Make sure to carry out the wiring in the power supply off condition.
- The linear output is not equipped with a protective circuit against short circuits. Do not connect the power supply or capacity load directly.
- When using the calculation unit, connect the mutual controller's linear GND.
- Be careful not to apply static electricity to the connector during wiring. Doing so could cause breakdown.
- Extend the cable between the sensor head and the controller using the exclusive cable, and keep the total length to within 10 meters. Be sure to use the exclusive extension cable (HL-T1CCJ□) to extend the cable from the sensor head. Use the same type of shielded cable for wiring from the controller.

Environment

- Avoid dust, dirt, and steam.
- Take care that the sensor does not come in direct contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground. Do not allow any water, oil, fingerprints, etc., which may refract light, or dust, dirt, etc., which may block light, to stick to the emitting/receiving surfaces of the sensor head. In case they are present, wipe them with a clean, soft cloth or lens paper.
- Prevent sunlight or light of the same wavelength or other interfering light from shining on the sensor head's light receiver. In cases where particular accuracy is required, install a shade plate, etc. so that the interference light will not strike the sensor head.
- If the regular reflection light from the workpiece is strong, such as in the case of a glass or mirror-surface item, the reflection light may disallow proper detection. In such a case, adjust the mounting angle so that the reflection light does not enter the emitter or receiver.
- When the sensor is mounted, stress should not be applied to the sensor cable joint and the connector part.
- This sensor is suitable for indoor use only.
- Avoid use at places subject to intense vibrations or shock.

Interchangeability

- The sensor head and controller are interchangeable. It is also possible to replace only the sensor head.

Mutual Interference

- Mutual interference can be prevented during use by using the sensor head and controller with a calculation unit (HL-AC1-CL) connected between them.

Display Values

- This product outputs the judgment of the laser light analog quantity. Since there is variation in the light intensity between the center and the edges of the detection area, and emitter side and the receptor side, the "display value" does not equal "the actual dimensions", so caution is necessary. Use the displayed dimensional value as a criterion.

Other

- Absolutely do not attempt to disassemble this product.

5 Major Specifications

Sensor heads		Beam diameter 1mm type	Sensing width 5mm type	Sensing width 10mm type
Model No.	IEC/JIS/GB/KS standards conforming type	HL-T1001A	HL-T1005A	HL-T1010A
Item	FDA standards conforming type	HL-T1001F	HL-T1005F	HL-T1010F
Applicable controller	HL-AC1, HL-AC1P			
Sensing range	0 to 500mm	500 to 2,000mm	500mm	
Sensing width	φ 1mm	φ 1 to φ 2.5mm	5mm	10mm
Min. sensing object	φ 8 μm opaque object	φ 50 μm opaque object	φ 0.05mm opaque object	φ 0.1mm opaque object
Repeatability	4 μm (Note 1)	—	4 μm (Note 1)	
Linear output resolution (Note 2)	4 μm (Notes 1,3)	—	4 μm (Note 1)	
Emission indicator	Green LED (lights up during laser emission)			
Interference prevention function	Two units of sensors can be mounted closely. (When the controller interference prevention function is used)			
Environmental resistance	Ambient humidity: 0 to +50°C (No dew condensation), Storage: -25 to +70°C Ambient temperature: 35 to 85% RH, Storage: 35 to 85% RH Ambient illuminance: Incandescent light: 10,000lx at the light-receiving face			
EMC	Emission: EN50081-2, Immunity: EN50082-2			
Voltage withstandability	1,000V AC for one min. between all supply terminals connected together and enclosure			
Insulation resistance	100M, or more, with 250V DC megger between all supply terminals connected together and enclosure			
Vibration resistance	10 to 500Hz frequency, 1.5mm amplitude in X, Y and Z directions for two hours each			
Shock resistance	300mm/s ² acceleration (30G approx.) in X, Y and Z directions for three times each			
IEC/JIS/GB/KS standards conforming type	Red semiconductor laser Class 1 (IEC / JIS/GB/KS) modulated, max. output: 0.2mW (peak emission wavelength: 650nm)	Red semiconductor laser Class 1 (IEC / JIS/GB/KS) modulated, max. output: 0.35mW (peak emission wavelength: 650nm)		
FDA standards conforming type	Red semiconductor laser Class II (FDA) modulated, max. output: 0.2mW (peak emission wavelength: 650nm (IEC / JIS/GB/KS: Class 1))	Red semiconductor laser Class II (FDA) modulated, max. output: 0.35mW (peak emission wavelength: 650nm (IEC / JIS/GB/KS: Class 1))		
Material	Enclosure: Polyetherimide, Case cover: Polycarbonate, Front cover: Glass			
Cable	0.09mm ² 3-core shielded cable with connector, 0.5m long			
Cable extension	Extension up to total 10m is possible, with the optional cable. (Note 4)			
Weight	Emitter: 15g approx., Receiver: 15g approx.		Emitter: 30g approx., Receiver: 20g approx.	
Accessories	MS-HLT1-1 (Sensor head mounting bracket): One set of two brackets for both the emitter and the receiver CN-HLT1-1 (Sensor head to controller connection cable): 1 No. Laser beam alignment sticker: 2 Nos. Chinese laser class label set :1 set Label set (FDA standards conforming type only): 1 set			

- Notes: 1) In case of an average sampling rate of 64 times.
2) Value calculated with the linear output allowance factor (±3σ) when connected to the controller included in the calculation of the detection width.
3) This value was obtained by converting the range of linear output fluctuation (±3σ) into a sensing width, assuming that the smallest sensing object blocks the beam at the approximate center of the beam diameter of 1mm.
4) The following types of extension cables are available (for extending the distance between the sensor head-controller connection cable and the controller itself)

HL-T1CCJ4 (4m)
HL-T1CCJ8 (8m)

6 Dimension (Unit: mm)

Note: IEC/JIS/GB conforming products do not contain light beam shielding plate, or certification/identification label.

- **MS-HLT1-1** Sensor head mounting bracket for HL-T1001A (F)/HL-T1005A (F) [This accessory is included with the HL-T1001A (F)/HL-T1005A (F). Also available for purchase separately.]
- **MS-LA3-1** Sensor head mounting bracket for HL-T1010A (F) [This accessory is included with the HL-T1010A (F). Also available for purchase separately.]

Material: Cold rolled carbon steel (SPCC) (Uni-chrome plated)
Two M3 (length 20mm) screws with washers are attached.

7 Option

- Through installation of an optional side view attachment (HL-T1SV□), the direction in which the laser beam shines can be changed.
- The optional side view attachment (HL-T1SV□) can be mounted on one side only, on either the emitter or the receiver, and used.
- Use the M2 (length: 6mm) screws supplied with the side view attachment to mount it, and the tightening torque should be 0.08N·m or less.

8 INTENDED PRODUCTS FOR CE MARKING

- The models listed under "5 SPECIFICATIONS" come with CE Marking. As for all other models, please contact our office.
